

CSS layout (divs) assignment

JMC 105

■ 10 points

The purpose of this assignment is to show that you understand how to use CSS to create a page layout. Create a page that looks exactly like the one you see below. The header and footer are 800 pixels wide. The sidebar is 190 pixels wide with a 10-pixel black border on the right. All text is wrapped in h1 tags. Don't forget the title of the page.

Your file should be named **divs.html** and should use an internal stylesheet. When you are finished, upload the file to www.yoursite.com/divs.html and share a link to your page as a comment on the **Class 6 post** on our class blog: <http://j105online.blogspot.com/>
